# Automatic Frequency Drive

The Topcool's automatic frequency drive or TFD is a revolution in the drive's technology. Being fully automated and equipped with a durable filter, it is specially designed to control the indoors micro-climate of any farm. You must enter the data once, and it will do the rest. The TFD will make your fans setup perform better and be a game changer in your electricity consumption. With this formidable German drive, you could put more fans at a lower speed and still save money on your electrical bill. The whole point of the TFD is to make the customer's life more convenient and make them save money at the same time.

## **BENEFITS**

Seize the opportunity to make your ventilation system operates when your livestock truly needs it. This TFD can control up to 19 1.1kW fans automatically at the same time and will help to extend their lifetime. Being pre-programmed from our factory, this drive will make your current ventilation system operate gently and quietly while bringing your energy consumption down.

### **HOW DOES IT WORK?**

By connecting inside temperature sensors till a maximum of 2 per TFD and in combination with an optional relative humidity sensor, you will run your ventilation setup automatically based on your livestock requirements. If you already have a climate computer, you will be able to hook-up the TFD using the 0-10V input connection.

### **FEATURES**

- IP55
- Perfect for agricultural or industrial use
- User-friendly
- Shipped pre-programmed
- No limitation to the motor cable length
- Available with inside and outside temperature sensor
- Interference-free drive with its integrated all pole sine filters
- Can control up to 10 Cyclone 72"

# **OPTIONS**

- Inside temperature sensor with a 20m cable
- Outside temperature sensor with 20m cable
- Relative Humidity sensor
- Manual override unit (TFD-BPS) in a separate box built-in IP6
